

SRILEKHA DOOSA

New Jersey, NJ (Open to Relocate) | +1 (551) 414-8929 | Srilekhadoosa@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

- Data Analyst professional with 6 years of experience delivering scalable reporting solutions, interactive dashboards, and data visualization insights across banking, healthcare, and retail domains, enabling data-backed decision-making and improving business performance.
- Strong expertise in Power BI, Tableau, advanced SQL, and Python to analyze large datasets, build KPI-driven dashboards, and deliver actionable insights that enhance reporting efficiency and support strategic business decisions.
- Experienced in building end-to-end data workflows using Azure Data Factory, dbt, and cloud data platforms, with a focus on data modeling, performance optimization, and ensuring high-quality, reliable datasets for analytics and reporting.
- Proven ability to translate complex business requirements into self-service BI solutions, enabling real-time analytics, improving reporting accuracy, and driving measurable outcomes across cross-functional teams.
- Adept at designing scalable data models, optimizing SQL queries, and delivering interactive visualizations that improve stakeholder insights, increase dashboard adoption, and support business intelligence and strategic planning initiatives.

TECHNICAL SKILLS

Business Intelligence & Visualization: Power BI (Service, Dataflows, Row-Level Security, Performance Optimization), Tableau (Desktop, Server)

Data Analysis & Querying: Advanced SQL (Query Optimization, Performance Tuning, Window Functions, Stored Procedures, Indexing), Python (Pandas, NumPy), DAX, Power Query (M)

Data Modeling & Semantic Layer: Dimensional Modeling, Star Schema, Fact & Dimension Design, Tabular Models, Semantic Layer

Data Warehousing: Snowflake, Amazon Redshift, Azure Synapse Analytics, PostgreSQL

Data Integration & Transformation: Azure Data Factory, dbt

Analytics & Reporting: KPI Development, Dashboard Design, Self-Service BI, Data Storytelling, Drill-through & Interactive Reporting, Reporting Automation

Data Quality & Governance: Data Profiling, Data Validation, Data Cleansing, Data Lineage, Data Cataloging

Cloud Platforms: Microsoft Azure (Data Lake), AWS (S3)

Collaboration & Workflow: Git, Jira, Confluence

PROFESSIONAL EXPERIENCE

Data Analyst Purpose Financial (Remote)	Jul 2024 - Present
• Designed interactive Power BI dashboards using DAX and Power Query to track revenue, churn, and acquisition KPIs, which improved reporting efficiency by 35% and enabled faster executive decision-making. • Consolidated multi-source financial data through Azure Data Factory and SQL pipelines into Snowflake, reducing manual data preparation by 40% and improving data availability for analytics. • Optimized reporting performance by implementing star schema data models, which reduced dashboard load time by 30% and supported scalable analysis of high-volume datasets. • Automated recurring reports via Power BI Service dataflows and scheduled refresh, cutting turnaround time from days to hours and removing dependency on manual Excel processes. • Analyzed customer transaction patterns using advanced SQL with window functions, leading to a 15% increase in targeted campaign conversions through better audience segmentation. • Collaborated with stakeholders to define business KPIs and translated them into drill-through enabled dashboards, increasing data accessibility and improving decision turnaround time. • Improved data reliability by implementing validation pipelines using Python (Pandas) and dbt, reducing reporting discrepancies by 25% across financial datasets. • Enhanced dashboard usability by refining DAX calculations and data models, increasing user engagement and adoption across business teams consuming reports.	
Reporting Analyst Express Scripts Inc NJ	Dec 2023 - Jun 2024
• Developed interactive Tableau dashboards to monitor claims processing and eligibility KPIs, reducing reporting latency by 30% and improving visibility into operational performance. • Optimized data extraction by writing advanced SQL queries with window functions, which improved query efficiency and ensured timely availability of reporting datasets. • Enabled self-service analytics by publishing structured datasets on Tableau Server, reducing manual report requests and increasing accessibility for business users. • Improved data accuracy by conducting data profiling and validation checks, identifying inconsistencies in claims data and increasing reliability by 20%. • Consolidated claims, billing, and patient datasets using Azure Data Factory, resulting in a unified reporting layer that enhanced data consistency across analytics workflows. • Delivered actionable insights through Tableau visualizations and KPI dashboards, supporting stakeholders in reducing claim processing delays and improving efficiency. • Identified operational trends using SQL and Python (Pandas) analysis, contributing to a 15% improvement in resource planning and claims processing timelines. • Strengthened reporting compliance by applying data governance and validation frameworks, ensuring consistency and accuracy across regulatory healthcare reports.	
Business Intelligence Analyst Barclays Bank (Remote)	Feb 2023 - Nov 2023
• Created Power BI and Tableau dashboards for transaction and fraud KPIs, which improved reporting visibility and reduced analysis turnaround time by 30%.	

- Uncovered anomaly patterns by analyzing transaction datasets using advanced SQL with window functions, increasing fraud detection accuracy by 20%.
- Streamlined reporting operations through Power BI Service dataflows and scheduled refresh, improving data availability and reducing manual reporting effort across teams.
- Improved dashboard responsiveness by implementing star schema data models, reducing query execution time by 25% for large financial datasets.
- Generated customer segmentation insights using SQL and Python with Pandas, increasing campaign engagement by 15% through targeted recommendations.
- Partnered with compliance teams to define KPIs and delivered interactive BI dashboards, improving visibility into regulatory metrics and audit readiness.
- Reduced report latency by optimizing SQL queries and indexing strategies, enhancing performance of dashboards used for financial monitoring.
- Delivered executive-level insights through Power BI visualizations and data storytelling, enabling faster strategic decisions and improving operational transparency.

Operations Analyst

Mar 2019 - Dec 2021

Smartertron | India

- Structured Tableau dashboards to track inventory movement, sales trends, and supply chain KPIs, which improved operational visibility and reduced reporting delays by 25% across business units.
- Analyzed inventory and sales datasets using SQL, identifying stock imbalances and reducing discrepancies by 18%, which improved overall inventory accuracy and replenishment planning.
- Integrated product, logistics, and sales data through Azure Data Factory pipelines, creating a centralized data layer that improved reporting consistency and accessibility for operations teams.
- Enabled faster response to demand changes by delivering interactive Tableau dashboards, allowing stakeholders to monitor real-time performance and improve fulfillment efficiency.
- Improved dataset reliability by conducting data profiling and cleansing, reducing inconsistencies by 20% and ensuring accurate inputs for operational reporting.
- Gathered reporting requirements from business teams and translated them into KPI-driven dashboards, improving decision-making speed and alignment across supply chain functions.
- Strengthened reporting accuracy by implementing data validation frameworks, ensuring consistency across integrated datasets used for operational analysis.
- Supported demand planning by analyzing historical sales data using SQL and Python (Pandas), improving forecast accuracy by 15% and optimizing inventory allocation strategies.

PROJECTS

Financial Performance Analytics Dashboard

- Consolidated multi-source financial data using Azure Data Factory and SQL into Azure Synapse Analytics, enabling consistent data ingestion and improving reporting readiness across business units.
- Developed Power BI dashboards with DAX measures and Power Query transformations to track revenue, profitability, and customer metrics, improving real-time monitoring and reducing reporting delays by 40%.
- Structured dimensional data models with star schema and tabular models, improving query performance and enabling scalable analytics across large financial datasets.

Healthcare Claims Analytics System

- Integrated claims, patient, and billing datasets using SQL, enabling a unified data layer that improved accessibility and consistency for healthcare reporting.
- Built Tableau dashboards with interactive filters and KPI tracking to monitor claims processing and patient trends, improving operational visibility and reducing reporting lag.
- Optimized data extraction using advanced SQL query tuning, improving query performance and enabling faster analysis of large healthcare datasets.

Customer Insights & Marketing Analytics

- Analyzed customer datasets using Python (Pandas) and SQL, identifying high-value segments that improved targeting strategies and increased campaign conversion by 15%.
- Designed Power BI dashboards with DAX-based KPIs to track campaign performance and ROI, improving visibility into marketing effectiveness for stakeholders.
- Transformed and prepared datasets using Power Query and SQL, ensuring clean and structured data for accurate reporting and consistent analytics outputs.

EDUCATION

Masters in Computer Science

Stevens Institute of Technology | New Jersey

Bachelors in Computer Science

Malla Reddy College of Engineering | India
